

DEAN YOO

Chicago, IL · 312-610-3907 · hyart2021@gmail.com · dean-yoo.com · linkedin.com/in/deanyoo

Product designer who tests what he ships: introduced the first usability testing practice in company history at FiPet, raised bias recognition accuracy from 31% to 78% at Biasly, and cut a critical misclick rate from 83.5% to 0% across two testing rounds with 12 working CX professionals on a self-initiated AI product.

Education

School of the Art Institute of Chicago

BFA, Visual Communication

Chicago, IL

Expected Dec 2026

Experience

FiPet

Jan 2026 – May 2026

Product Design Intern, Lead on Quiz Battle

Remote

- Led the 1v1 Quiz Battle feature end to end: discovery research, 30 hi-fi Figma screens, two testing rounds, and engineering handoff
- Ran the first usability test in company history (Maze, unmoderated): 100% task success across 22 recorded sessions, 4.2/5 fun rating, and 90% replay intent; testing became the team's default practice
- Built the design system adopted for the app-wide redesign: single accent palette, Inter type ramp, 8pt grid, and a standardized SVG icon set that resolved cross-platform rendering bugs
- Reversed the PM's commerce-first result screen with a research-backed case; the Play Again CTA shipped as primary, validated by the 90% replay intent

Biasly

Oct 2025 – Dec 2025

Product Design Intern

Remote

- Raised bias recognition accuracy from 31% to 78% and cut median time-to-identify from 9s to 3s by moving bias context above the headline in the mobile news feed (12 moderated sessions, observer-coded)
- Diagnosed the root cause as scan order, not visibility: 69% of users could not identify bias on articles they had just read; a color-coded spectrum cut missed indicators by 60%, and the direction shipped after handoff and QA

Urban Creator

May 2025 – Jan 2026

Graphic Designer, Part-Time

Remote

- Created motion graphics for a Times Square billboard placement, delivering the closing 5-second brand spot for a multi-day run
- Designed the launch campaign for Lotteria's first U.S. restaurant across pre-opening, soft opening, and grand opening phases, including a large-format highway billboard, and supported store marketing post-launch
- Produced interactive video ads for LG and Lotteria, distributed on OnDemand Korea, Roku, and other TV and web platforms
- Owned Korea Tourism Organization social marketing end to end, creating and publishing 40+ original posts across Instagram, Facebook, and X at a steady 6-per-month cadence
- Designed posters and banners across 10+ brand campaigns including HYBE, LG, and Pepero; advised on Lotteria's U.S. website and maintained the company website

Selected Projects

Sift, AI Ticket Triage • Self-initiated

Jun 2026 – Jul 2026

- Designed an AI triage product around calibrated trust: frequency-framed confidence ("right about 41 of 100"), explicit thresholds, and human review routing, across 21 screens and a fully wired Figma prototype
- Ran two rounds of unmoderated Maze testing with 12 working CX professionals; Round 1 falsified the settings design, and the rebuilt "one destination, multiple doors" pattern cut mission misclick rate from 83.5% to 0%
- Sense of control rose from 3.0 to 4.4 of 5 between rounds; even at 95% stated AI confidence, 3 of 5 experts still skimmed before accepting, evidence that shaped the product's human-in-the-loop defaults

Lyft Bike Redesign • Concept

Mar 2026 – May 2026

- Designed a rider-facing layer over Lyft's existing operations infrastructure (dock prediction, dynamic pricing, iOS Live Activities) requiring no new technology; Maze testing showed 100% success on dock planning and 4.4/5 rider confidence

Skills

Design: Product design, UX research, usability testing (Maze, moderated and unmoderated), prototyping (interactive and coded), design systems, interaction design, motion graphics, typography, grid systems

Tools: Figma, Sketch, Framer, Maze, Adobe Creative Suite (Illustrator, Photoshop, InDesign, After Effects), Webflow, Notion · React (Vite, Next.js, Tailwind), TypeScript, HTML/CSS, Vercel, Claude Code

Languages: Korean (native), English (fluent)
