DEAN YOO

Chicago, IL · 312-610-3907 · hyart2021@gmail.com · dean-yoo.com · linkedin.com/in/deanyoo

Product designer who builds what he designs: leading AwardSpring's first mobile app from discovery to App Store release, designed and tested an AI triage product that cut a critical misclick rate from 83.5% to 0%, and built the design system FiPet adopted app-wide.

EXPERIENCE

Design Engineering Intern | AwardSpring, Hybrid · Sep 2026 – Present

- Lead AwardSpring's first mobile app end to end, owning planning, research, design, build, and App Store release
- Prototype in code rather than static mockups, carrying designs from Figma into working builds
- Build with AI in the workflow, using Claude alongside Figma and Azure DevOps across planning, design, and development

Product Design Intern, Lead on Quiz Battle | FiPet, Remote · Jan 2026 – May 2026

- Owned the 1v1 Quiz Battle feature end to end: discovery research, 30 hi-fi Figma screens, a coded React prototype, two testing rounds, and engineering handoff
- Built the design system adopted for the app-wide redesign: single accent palette, Inter type ramp, 8pt grid, and a standardized SVG icon set that resolved cross-platform rendering bugs
- Ran the first usability test in company history on the coded prototype (Maze, unmoderated): 100% task success across 22 sessions, 4.2/5 fun rating, and 90% replay intent; testing became the team's default practice
- Reversed the PM's commerce-first result screen with a research-backed case; Play Again shipped as the primary CTA, validated by the 90% replay intent

Product Design Intern | Biasly, Remote · Oct 2025 – Dec 2025

- Raised bias recognition accuracy from 31% to 78% and cut median time-to-identify from 9s to 3s by moving bias context above the headline in the mobile news feed (12 moderated sessions)
- Diagnosed scan order, not visibility, as the root cause: 69% of users could not identify bias on articles they had just read; a color-coded spectrum cut missed indicators by 60% and shipped after handoff and QA

Graphic Designer, Part-Time | Urban Creator, Remote · May 2025 – Jan 2026

- Created motion graphics for a Times Square billboard, delivering the closing 5-second brand spot for a multi-day run
- Designed the launch campaign for Lotteria's first U.S. restaurant across three opening phases, plus posters and banners for 10+ brand campaigns including HYBE, LG, and Pepero
- Maintained the company website in Webflow and HTML/CSS and advised on Lotteria's U.S. website

SELECTED PROJECTS

Sift, AI Ticket Triage | Self-initiated · Jun 2026 – Jul 2026

- Designed an AI triage product around calibrated trust: frequency-framed confidence (“right about 41 of 100”), explicit thresholds, and human review routing, across 21 screens and a fully wired Figma prototype
- Ran two rounds of unmoderated Maze testing with 12 working CX professionals; Round 1 falsified the settings design, and the rebuilt “one destination, multiple doors” pattern cut mission misclick rate from 83.5% to 0% and raised sense of control from 3.0 to 4.4 of 5
- Found that even at 95% stated AI confidence, 3 of 5 experts still skimmed before accepting, evidence that shaped the product's human-in-the-loop defaults
- Fine-tuned a DistilBERT ticket classifier and shipped it as a live in-browser demo (ONNX, transformers.js)

EDUCATION

School of the Art Institute of Chicago | Chicago, IL · Expected Dec 2026

- BFA, Visual Communication · SAIC Merit Scholarship, awarded at admission on portfolio review

SKILLS

Design: Product design, interaction design, visual design, design systems, AI product design, prototyping (Figma and coded), UX research, usability testing (Maze, moderated and unmoderated), typography, grid systems, motion graphics

Build: React (Vite, Next.js, Tailwind), TypeScript, HTML/CSS, Figma Plugin API, Vercel, Claude Code

Tools: Figma (Components, Variables, Auto Layout), Framer, Maze, Adobe Creative Suite (Illustrator, Photoshop, InDesign, After Effects), Webflow · Azure DevOps, JIRA, Slack, Notion

Languages: Korean (native), English (native)
